Frontier Prism Sight 1x15

SKU: 12060 • Red Dot

Illumination

Turn the sight on by pressing the ‘+’ or ‘-’ button on the top of the sight. The brightness can be adjusted using the ‘+’ and ‘-’ buttons. High brightness settings are recommended for daytime use when ambient light is bright. At times of low light such a dawn or dusk, a lower brightness setting is recommended. Lower settings may not be visible during bright daylight. To change between red and green coloured illumination, hold the '+' for 3 seconds. Built in A.I.M. (Auto Illumination Mode) technology puts the sight into standby mode if no movement is detected for 2 minutes. The sight will power on again as soon as movement is detected. Please note, when on standby mode, a small amount of power will still be consumed from the battery. The sight will shut off if no movement is detected for 4 hours. The sight can be powered off by holding the ‘-’ button for 3 seconds. This sight uses a CR2032 coin style lithium battery. To insert a battery unscrew the battery compartment cap on the side of the unit and insert a new battery ‘+’ side up.

Basics

Maintenance

The lens should occasionally be wiped clean with the lens cloth provided or an optical quality lens paper. Remove any external dirt with a soft brush to avoid scratching the lens. **Note:** Unnecessary rubbing or use of a coarse cloth may cause permanent damage to lens coatings. To clean the external surface of the sight it is recommended that a silicone impregnated cleaning cloth is used to protect the sight against corrosion. Always store in a moisture-free environment.
