FFP Mil Pro II (15x) Reticle

Developed specifically for first focal plane optical systems and based around the common principles of Mil spaced reticles. With half Mil spaced markings extending out to 10 Mil of holdover, the FFP Mil Pro is a versatile reticle that provides aim points no matter how extreme the distance.

BIG BORE AIRGUNS ARE ON THE RISE!

By Tom Gaylord

What's new in the airgun world for 2026? something that's brand new but it is a trend that's been building over the past several years. That trend is big bore airguns and they are what's hot in the world of airguns right now. Let's look.

AirForce Airguns TexRex

The TexRex from AirForce is AirForce's most powerful production big bore as this article is written. In .510 caliber and shooting a 650-grain lead bullet it develops over 1,100 foot-pounds of energy at the muzzle. And a variation of it was shown at the 2026 SHOT Show.

The TexRex Brush Gun is a more compact version of the TexRex that develops over 700 foot-pounds of energy out of a 16-inch barrel. I have fired this one and it is a beast!

The AirForce TexRex Brush Gun packs a lot of power into a small package.

Umarex Tusk

Umarex has made the .50-caliber Hammer big bore for many years, but this year they introduced the Tusk—a smaller .357-caliber 8-round repeater that develops up to 225 foot-pounds

of energy for medium-sized game like coyotes.

The Umarex Tusk is an 8-shot .357-caliber big bore that's new for 2026.

Umarex Primal

Not to be outdone by themselves Umarex is also bringing out the Primal, a 20 gauge or .615-caliber big bore air shotgun. It has a 3-shot magazine and fills to 4,000 psi to get three powerful shots per fill. The velocity can reach up to 700 f.p.s., so this is an air shotgun that can really be used.

Besides being a shotgun, the Primal comes with an attachable rifled choke that provides good accuracy with rifled slugs. This is another new big bore I have shot and I did manage to hit my target each time. The slugs are proprietary and come with attached wads that help seal the bore.

Not every big bore is new this year. Hatsan has their Carnivore that comes in both .30 and .357 calibers. That one isn't as powerful as the

other brands, but the accuracy is said to be astounding. And of course, that rifle gives many more shots per fill of air that, by the way, only takes 2900 psi. For real power Hatsan also offers the Piledriver, whose .457 caliber is the small one at just 700+ foot pounds of power on tap. Next up is .510 that offers over 800 foot-pounds, followed by the giant .62-caliber that launches a 700-grain solid lead slug or a 650-grain hollowpoint to develop up to 700 foot-pounds of energy.

Hatsan's Piledriver is their most powerful big bore. It comes in .457, .510 and even in .62-caliber!

Air Venturi Seneca Dragon Claw II

Even Air Venturi is in the big bore game with the .50-caliber Seneca Dragon Claw II. Developing up to 340 foot-pounds of energy, it's good for larger medium-sized game like white-tail deer and feral hogs. And in a field where the prices are high, the Dragon Claw II is a bargain.

The Dragon Claw II offers two levels of power so if you just want to plink there are many more shots per fill. Maybe you think plinking isn't something big bore shooters do, but since their airguns are not usually backyard-friendly, they tend to shoot them a lot when they get to out in the field.

AEA Zeus

AEA claims to have the most powerful air rifle in the world—the Zeus II. This rifle comes in both .58 and .72 caliber. The output for the .72-caliber version is up to 1,500 foot-pounds at the muzzle though there have been claims of even higher energies.

A New Trend

For the 32 years that I have been writing about airguns the calibers considered smallbore have been

.177, .20/5mm, .22 and .25. I see a move now to include .30 caliber in that group. I say that because several airgun manufacturers are now offering their standard model rifles in that caliber.

This isn't a deliberate move, nor has any company announced an intention to do it. It is just happening. From this point on it seems to me that .357/9mm will mark the entry level for what constitutes a big bore airgun.

That begs the question of the .25 caliber than is also called .257 when it wants to be recognized as a big bore. Rifles in that caliber shoot heavier slugs at high velocities and are used to take medium-sized game at distances greater than 100 yards.

Summary

The world of big bore airguns has heated up in the past several years and 2026 looks like it will be more of the same.

LEVER ACTION AIRGUNS

By Tom Gaylord

When I was a kid the Daisy Red Ryder that's still being made today was very popular. It had a lever to cock the powerplant, and we were enamored with cowboys, so we all wanted one.

But the Red Ryder was nothing like a true lever action firearm. Instead of rapidly working the lever like the Rifleman we watched on TV you had to brace the butt of the gun against a leg and pull the lever with all your strength.

This was something airgunners noticed and lamented over. We wanted realism even back in the black and white world I grew up in. If it worked that way on TV why didn't our guns do the same?

ELG 10

In the 1970s the German firm of Erma started exporting an air rifle known as the ELG 10, the ELG probably standing for Erma Luft Gewehr. It was a high-quality pellet rifle, but once again it did not operate like a true lever action firearm.

The ELG 10 looked like a fine lever action rifle...

...until it was cocked. The cocking lever did half the work when pulled down and the other half when it was closed.

Career 707

Then in 1995 American airgunners saw the powerful South Korean Career 707 rifle for the first time. It was a real lever action pellet rifle that operated as it should—or it could easily be modified into one.

That rifle was manufactured and modified over time until today when Pyramyd AIR sells the Air Venturi Seneca Eagle Claw lever action pre-charged pneumatic (PCP) in both .22 and .25 calibers.

The Air Venturi Seneca Eagle Claw is the latest iteration of powerful lever action PCPs that have been in the US since the mid-1990s.

Adult Red Ryder

Just a few years ago Daisy began marketing an adult-sized Red Ryder BB gun. All they did was add a little length to the buttstock to make the pull a bit more suited to larger shooters.

Walther

And then there is the Umarex Legends Cowboy Lever Action Rifle that's actually a BB gun. It features individual shells that are ejected when the lever is worked.

Reximex

The Reximex Lieva PCP is new for 2026. This lever action precharged pneumatic rifle (PCP) looks like a Winchester lever action. The Lieva comes in .177, .22 and .25 calibers. The magazine capacity is 14, 12 and 10 pellets, respectively.

Lever-action airguns have come a long way in the early 21st century but so there is still room for improvement.

INTRODUCING ARCHERY PRO SHOP

Scan Me!

Skip the hassle of a local bow shop. They said it could not be done, but we did!

Our patented (U.S. Patent No. 12,405,080) process needs just 3 simple measurements and we can customize your bow to exactly what you need, and have it shipped to you without leaving your house.

HOW IT WORKS

Choose Your Bow*: Discover the perfect blend of technology and tradition with our extensive selection of compound bows.

SEND US YOUR SPECS

Enter your preferences such as draw weight, and measurements such as eye height.

WE SET IT UP

Accessories installed, cams timed, peep set and more by our certified master technicians.

WE SHIP IT

Your new bow will arrive tuned and tested. All you need to do is sight in and you're ready to shoot!

**Only applicable to bows shipped & sold by Pyramyd AIR*

VERTICAL BOWS

ACTION TARGETS FOR AIRGUNS

By Tom Gaylord

Airgunners on my blog talk about shooting “feral” cans. They want something they can see and hear when it’s hit. What they really want are action targets.

Action Targets

Action targets are targets that react when hit. They give satisfying feedback. You hear something or something moves. When I was assigned to Fort Knox in the 1970s my family lived in government housing and my house, by the luck of the draw, backed up to a wooded gully with no houses beyond.

I had just bought an FWB 124 from Bee-man’s and it was scoped. I needed a target! In the gully behind my house was a big tree with low-hanging branches. So, I stuck a tin can over the end of one of those branches and proceeded to shoot it offhand from my back door — a distance of 35-40 yards. The can made a delightful sound when hit, so I never had to go down and look to see if I hit it. When it stopped making a sound, I changed it for a fresh can and continued the game. Yes, I used to shoot at tin cans like many of you.

Field Targets

The sport of field target was based on action targets. It has become a formalized sport that even has a world championship match, but it started as something simple. It’s too formalized for me these days but it does show the attraction of action targets. Metallic silhouettes are another kind of action target that have become formalized. There is an airgun component of Siluetas Metalicas—the Mexican sport of silhouettes, and at the Pyramyd AIR Cup the Gunslynger match is a takoff on that!

Low Power Targets

If your targets are balloons the power you need to break them is very low. I used to shoot balloons with a 10-meter target pistol. I blew up several balloons, each inside the other and each a different color. The object was the break the balloon without breaking the one inside it. If that becomes too easy, start shooting aspirin off the top of the balloon without popping it. Put three aspirin side by side and try to knock off one without disturbing the others.

Need for Power

When shooting some action targets the need for power arises. A neat action target that Air Venturi offers is the Rockin’ Rat. I discovered that this action target needs to be hit with some energy to operate. It certainly worked when hit by my Diana K98 pellet rifle.

Big Bore Action

Yes, there are even action targets that are suitable for big bore airguns. Some are made for centerfire firearms, so you know no big bore airgun is going to be too extreme.

Finally

If you don’t have a lot of money to spend on action targets don’t fret. You can shoot at rotten fruit and eggs. This is quite fun with semiautomatic and full-auto guns. And don’t overlook the lowly tin can. Regardless of what you choose, action targets can change your shooting experience altogether!

It's Competition Time!
